Sick of splash?

Rough, choppy water often has a habit of putting a crimp on boat-ing plans.

The people at Conrad Marine, a newcomer in pontoon boat manufacturing, have announced a major breakthrough in safety combined with performance to meet the needs and demands of pontoon boaters. The system, called T.A.P. (Technically Advanced Performance), is a designed pair of fins for the twin-hulled crafts. The makers have performed hundreds of hours

of testing and have proved that T.A.P. greatly increased handling and stability in rough water. The testing has also proven enhanced handling in "normal" water conditions as well.

The T.A.P. is available as an aftermarket accessory for pontoon boats. Designed to offer existing pontoon boat owners safety and performance, this product will be easily installed and very functional.

For more information on the T.A.P. system, write in Reader Service No. 991E or contact Conrad Marine Inc. directly at 6453 South Highway 45, Oshkosh, WI 54901; telephone: 920-688-3166; Internet: www.conradmarine.com.
