**Cool New Watersports Gear**

ity and comfort is unrivaled, and

bonding experience.

feet-pounds of thrust. ■

## REACH TOP SPEEDS OF UP TO 40 MPH

If you have a need for speed, you can scratch that itch if you set up your pontoon boat correctly. One of the most important innovations to consider is the tripletoon option that you can get on many Sanpan, Aqua Patio, Sweetwater or Parti Kraft pontoon boats. An additional tube gives more stability, a better rough-water ride, allows the pontoon to get on top of the water for less drag, and most importantly, gives you the ability to bolt on one of the new, fuel-efficient V6 4-strokes, or even equip it with a powerful inboard/outboard engine. Choosing one of the available performance packages also gives you 2- or 4-inch lifting strakes, hydraulic steering and aluminum underdeck skin to further enhance your pontoon's performance. Another

key to boosting performance is the TAP® Fin System. Recommended for pontoons with engines of 90 hp or more, the system delivers superior water management through the lifting fins that redirect water down to reduce drag and harness the spray coming off the pontoon. By lifting the pontoon onto the surface of

the water, the TAP® Fin System delivers greater maneuverability, a smoother ride and exceptional handling. With properly installed equipment and a higher-horsepower engine, these performance-enhancing options create a wake that is ideal for tubing or waterskiing and can help your pontoon reach speeds of up to 40 mph.
